Continuation of 3. NOTE: (b) the proposed amendment(s) raise the issue of new matter with respect to the limitation "wherein said sequence is at least 30 nucleotides in length and confers vascular-preferred polynucleotide transcription" in claim 4.

Continuation of 11, does NOT place the application in condition for allowance because:

The claimed invention is not adequately described; while paragraphs [0074] to [0079] of the published application (pages 22-24 of the specification) describe variant polynucleotides in general art recognized terms of percent identity and hybridization, paragraphs [0074] to [0079] of the published application (pages 22-24 of the specification) do not describe the structure of any actual functional variant of SEQ ID NO:47.

The full scope of the claimed invention is not enabled; while Applicants maintain that the specification provides extensive disclosure of functional variants that are 95% identical to SEQ ID NO: 47 and confer vascular-preferred polynucleotide transcription, and methods of producing and using these variants, at paragraphs [0124] to [0135] in the published application (pages 44 to of the specification), the Examiner maintains that paragraphs [0124] to [0135] in the published application (pages 44 to 47 of the specification) do not disclose even a single functional variant of SEQ ID NO:47, as paragraphs [0124] to [0135] in the published application (pages 44 to of the specification) disclose only general methods that were known in the art at the time of filing, and their use to construct and screen Pinus radiata and Eucalyptus grandis cDNA libraries.

Claim 2, and claims 3-6 dependent thereon, are indefinite, as the proposed amendment(s) were not entered.

Claim 4 is anticipated by Polvere, as the proposed amendment(s) were not entered...
